1 Problem Statement

Design an 8bit * 8bit multiplier using HLS. There will be two 8bit inputs (use char data type) and one 16bit output (use short data type). Use ap_none interface for the port interfaces. Write an HLS testbench to verify the output of the design. Pass 10 pair of input values to design and collect the output, and display inputs and outputs as part of the testbench.

2 Design Code

```
#include <stdio.h>

void mul(char a,char b,short *c)
{

*c = a * b;
}
```

3 Test Bench Code

```
#include <stdio.h>

int main()
{
char a;
char b;
short c;

int i;

for (i=0;i<=9;i++){
a = i+1;
b = i+3;
mul(a,b,&c);
printf("%d*%d=%d\n",a,b,c);
}
return 0;
}
```
